

Cobra Service Training

Maintain your Cobra system for optimal performance

Ensuring the reliability of Cobra systems is essential for technicians and maintenance personnel, as it directly supports safe and effective firefighting operations. The Cobra Service Training Course provides participants with specialised knowledge and hands-on skills to maintain Cobra equipment at optimal performance, ensuring it remains operationally ready for any situation.

Course overview

This two-day course combines theoretical lessons with hands-on exercises and can be conducted at the customer's location or another agreed location.

Certification

After successfully completing the training, participants receive the Cobra Service Technician certification, allowing them to service the following systems:

- Cobra Skid Unit
- C 330 P
- C 360
- C 360 H
- C 360 HLS

Ensuring service continuity & reliability

To uphold high service standards and operational reliability, we recommend that each workshop has at least one certified Cobra Technician. The certification is personal and non-transferable.

Upon successful course completion, participants will become certified Cobra Service Technicians and gain access to exclusive maintenance materials via our shared portal.

Cobra Service Training
